The search option works well and can bring up useful information about tips, blogs, or your friends who might have the same needs as you. Of course, the smart Search function also works for finding images, fonts, and websites that you might need. Even better, it finds them without you ever having to leave the application. Some photographers have built a living off of their Photoshop skills, and I respect that. Personally, though, I want to make investments in other areas of my work. So in the coming months, I'm going to return to my roots, adding another third-party photo editor to my toolbox of skills. The most notable update is the new Exposure function. Previously, one of the most time-consuming aspects of Photoshop was looking for the perfect exposure—dealing with over-shooting and underexposure in too many ways. Now, simply moving your exposure slider smoothly changes the entire look of an image, making it easier for you to achieve more professional results in a short amount of time. Here, the shortcuts feature is unique and easy to use. It makes it easy to select keyframes. But the most interesting feats can be performed with the keyboard shortcuts. As you type various shortcuts that might be available in the menus, the software flies back and forth between the two with the same speed. The upgrade being available at a discount is also nice; Adobe's subscription model gets a little better on the CC side. You still have to pay for the upgrade and the rest of your Photoshop subscription, but at least you can drop out of the subscription at any time and not have the price increase. But it can be a little scary to see a big company (like Adobe) making you jump through these hoops for an upgrade to their software, so it's worth asking.
